

MOBILE SYNC FOR SECURE INSTAMAIL WEBMAIL

Now you can sync your email, calendar, and contacts from Secure Instamail Webmail to your iPhone® or Android® devices.

Hosted Email

Secure Instamail Email hosting gives you the power to securely manage email from any web browser or the device of your choice - no licenses to keep track of or software to download.

On Your Desktop

Works with your favorite desktop software like Outlook®, Thunderbird®, Entourage®, or any POP/IMAP client.

On the Web

Manage Email, share Calendars and access your Company Directory from any web connection with Secure Instamail Webmail.

On Your Mobile

Check Secure Email on your BlackBerry®, iPhone®, Windows Phone®, Android®, or other mobile device.

Secure Instamail Email

With Secure Instamail hosted email services, you can access your mail when, how, and anywhere you need to, plus you get:

Support.

With exclusive support by phone or ticket, your complete satisfaction is our sole ambition—anything less is unacceptable.

25GB Mailboxes & 50MB Attachments.

No need to delete. Our 10GB mailboxes hold up to 10 years worth of email, and we're working to make them even larger.

Satisfaction-Guaranteed Uptime.

If your business email is down, business can come to a standstill. That's why we have a rock-solid SLA to protect you. Since you're not locked into a long-term contract, we need to keep you happy to keep your business.

Works with Exchange

Save money with the Exchange Hybrid. This option offers Exchange mailboxes, plus, affordable, full-featured, Secure Instamail Email mailboxes on a single domain. We make business email affordable for all businesses.

Premium Spam & Virus Protection.

To keep your systems safe from email-borne threats, messages received from external mailboxes undergo three spam and virus scans.

Easy Transition

Breeze through the setup of your hosted email service with a dedicated Transition Team member walking you through the necessary steps. Need migration assistance? We can help.

Secure Encryption.

Latest SSL encryption techniques hide data during transmission so Internet crooks can't access your sensitive mail.

Control Panel

Manage your entire hosted email environment, including permissions, storage, mailbox creation, and more with just a few clicks using our intuitive Control Panel.

Ad-Free and Privacy Guaranteed

Unlike hosted email services such as Google Gmail™, Microsoft Hotmail®, and Yahoo!® Email we don't read your email, and we never show you ads.

50MB Attachments

With Instamail hosted email, inboxes won't choke on photos, videos, and other large file attachments with twice the attachment size limit of other providers.

API Integration

Integrate our services into your workflow with our REST API. You'll have programmatic access to manage Admin Users, Insta Email & Exchange Mailboxes, Spam Settings, and Single-Sign-On capabilities..

Mobile Sync for Secure Instamail Webmail

Sync your Email, Contacts and Calendars between your webmail account and your Smartphone with Mobile Sync for Instamail Webmail (additional fee/month).

Free 250MB of SharePoint Sites

All of our email accounts have access to 250MB of SharePoint storage for free. Get more organized using Microsoft's powerful collaboration tool combined with your email for no additional charge.

Daily Backups.

Email data is saved nightly to top tier data centers. Restore from the past 14 days directly from the Control Panel at no additional cost.

Auto-Setup Tool

Instantly detects and configures Outlook, Thunderbird, and other popular email software. Easily set up a new email account or adjust settings for an existing account.

Shared Calendars and Company Directory

Share your calendar with multiple users, create multiple calendars, and import events from other calendar sources. Quickly access users' information from the shared Company Directory in the email interface or create personal contact lists to keep track of frequent contacts.

OUR EMAIL HOSTING SERVICES

- ✓ Use Outlook, Thunderbird or Entourage to check and send email.
- ✓ Send and receive invites to friends and co-workers using Insta Email or hosted Exchange email.
- ✓ Check and send email via a web-based email interface with either email hosting service.
- ✓ Have Calendar, Contact Manager, Task List Manager, Notes, and other features like in Outlook.
- ✓ Share calendars and collaborate with co-workers like in Outlook.
- ✓ Sync email and folders on the web with desktop email software, like Microsoft Outlook using IMAP.

EMAIL ON SMART PHONES

- ✓ Check and send email via my Phone.
- ✓ Sync incoming email messages on Phone with regular email account.
- ✓ Sync outgoing email messages on Phone with my regular email account
- ✓ Sync folders in regular email account with Phone.
- ✓ Sync Calendar and Contacts with desktop email software, like Microsoft Outlook
- ✓ The above mentioned features are enabled for free

Spam Filtering

We estimate that over 95% of all email traffic is spam. Spam is not only a distraction; it can serve as a vector for viruses, malware, and phishing attacks. The proliferation of spam has led to millions of dollars in lost productivity and additional infrastructure costs for businesses and service providers. Businesses that maintain in-house email servers are fighting a losing battle against spam because spammer tactics are constantly evolving. To defeat spam, the defensive technology and techniques must stay one step ahead of the rapidly changing threat.

Multi-layered Email Spam Filter

Our email spam filtering system is a continuously updated, multi-layered process that eliminates 98% of all spam with near zero false positives.

Layer 1: The Gateway Scan

As soon as an email arrives, the sending IP address is compared to an aggregated spam blacklist compiled from multiple spammer tracking systems. Our gateway servers also analyze the email message in the context of other arriving mail. If a large number of emails are coming simultaneously from a single IP or are addressed to random addresses that do not exist in our system, it could signify a spam attack and the email will be blocked. If the sending address is from a domain in our system but the mailbox does not exist, the email will be blocked. This last case is called "spoofing" and it is the reason you may have received spam from your own email address or domain.

Layer 2: Cloudmark^{reg}; Scan

All email is scanned by Cloudmark's industry leading spam detection software. Cloudmark uses Advanced Message Fingerprinting™ to detect spam, phishing, and viruses. Instead of relying on a spam blacklist, Advanced Message Fingerprinting examines algorithm patterns that expose spam across all languages and character formats. These patterns are updated every 60 seconds based on worldwide feedback loops and the latest spammer tactics.

Layer 3: The Message Sniffer Scan

Email is then scanned with Message Sniffer from ARM Research Labs. Message Sniffer relies on pattern recognition and machine learning technology to detect spam and malware. It searches the entire message for spam, virus, and malware features including unusual headers, structural artifacts, message source behaviors, obfuscation techniques, email and URL targets, binary and image signatures, unusual code fragments, and even coding styles.

Spam filtering is included at no additional cost with all Secure Instamail Email and Microsoft Exchange accounts.

Virus Protection

Approximately 2% of all incoming email messages are viruses. Instamail Email & Apps leads the email hosting industry with strong, multi-stage, server-level virus detection. Our antivirus protection begins with several important pre-scanning stages, followed by a continuously updated virus scanning stage. More than 100,000 virus-infected emails are blocked by our systems every day. During new virus outbreaks, this number can spike to over 1 million per day. The virus scanning system has been designed to handle these extreme spikes for extended periods of time, scanning every single email without mail delivery delays.

Email Antivirus Process

Our antivirus system scans all inbound and outbound emails using a multi-stage process. The process is broken down into the following four stages:

Stage 1: Restricted Attachments

Virus protection starts with scanning messages for dangerous types of file attachments. Dangerous files are those that can execute code, which can be used by malicious persons to spread viruses or do harm to your computer. Restricted file types include, but are not limited to, program files (.exe, .com), script files (.bas, .vbs, .js), and shortcuts to files (.lnk, .pif). When an email is sent or received that contains a restricted file attachment, the email is rejected and the sender receives a "bounced" email notification informing them of the restriction.

Stage 2: Normalization

This stage of the email antivirus process searches for email formatting vulnerabilities that can be used by viruses to hide from virus scanners. If any vulnerability is found, our system corrects the formatting of the message so that it can be thoroughly scanned for viruses. This is called "normalizing" the message, and most notably this process protects against all known Microsoft Outlook security threats.

Stage 3: Decompression

Next, if the email contains any compressed attachments such as zip files, the compressed attachments are temporarily unzipped so that the contents can be scanned for viruses. Many of today's viruses use compression as a way to sneak their way past virus scanners, sometimes even compressing themselves in several layers to try to hide from scanners. If an attachment cannot be decompressed, such as might be the case with password protected zip files, the original file is scanned for virus signatures that occur within compressed attachments.

Stage 4: Virus Scan

After the above preprocessing is complete, an email antivirus scanner is used to scan the email and all of its uncompressed attachments. Everything is scanned to ensure maximum protection against new virus threats. ClamAV (www.clamav.net) is the current scanner of choice, although our system was designed to be able to plug-in any virus scanner on the market, should the need to do so arise. Updated virus definitions are automatically pushed to our system. This gives our customers protection from new viruses within minutes. Virus definitions are updated hourly. In contrast, most desktop and server anti-virus programs are configured to check for new virus signatures only once per day.

Virus protection is included at no additional cost with all SecureInstamail Email and Microsoft Hosted Exchange accounts.
